SUMMARY

Senior full-stack engineer with a frontend focus and 7+ years shipping fast, polished React, TypeScript, and Next.js applications for web, desktop (Electron), and mobile (Expo). I own frontend architecture end-to-end — component systems, state management, data-heavy interfaces, and performance — and have contributed features, REST APIs, and fixes to Node.js/Express backends on MongoDB and PostgreSQL. Track record of 10x performance gains on data-heavy pages, migrating legacy codebases (jQuery to React, Webpack to Vite), building shared component libraries, and mentoring engineering teams.

PROFESSIONAL EXPERIENCE

Upstack Data

Senior Frontend Engineer | Remote | 2024 — 2026

Sole senior frontend engineer owning architecture and delivery of a data-analytics dashboarding platform.

- Owned the entire frontend architecture — from project scaffolding to production deployment — as the only senior frontend engineer on the team
- Migrated the build system from Webpack to Vite, cutting build times by 60%+ and eliminating recurring developer-experience friction
- Built a drag-and-drop chart builder with customizable visualizations, server-driven filtering, and URL query-param sync for shareable dashboard state
- Engineered a high-performance datatable handling 10K+ rows with IndexedDB caching, adjustable column/filter configs, and URL-persisted state
- Implemented the full authentication flow — registration, login, and Shopify OAuth for merchant onboarding
- Led a codebase modernization effort: refactored legacy patterns, standardized component architecture, and improved automated test coverage

React, TypeScript, Tailwind CSS, shadcn/ui, Zustand, TanStack Query, Vite

Cloud Employee (Zedsen)

Frontend Engineer | Remote | 2022 — 2024

Built the frontend from scratch for a hardware-integrated medical sensing platform and ported it to native desktop.

- Planned and built the frontend from scratch for a hardware-integrated medical sensing platform, coordinating closely with backend and hardware teams
- Ported the web application to native desktop (Windows/Linux) using Electron
- Created a 20+ component reusable UI library adopted across the engineering team

React, TypeScript, Electron

Freelance / Independent Projects

Frontend & Node.js Engineer | Remote | 2018 — 2022

Delivered frontend and Node.js work across trading platforms, ecommerce dashboards, and internal automation tooling.

- **Prosper Together** — Migrated 80% of the codebase to Next.js (build times 5–8s → <800ms); built 50+ technical-indicator chart components and an internal Canvas charting library, plus a schema-driven JSON form renderer (5x faster form dev).
- **RH Group** — Built Node.js integrations (Airtable, HubSpot) for data normalization and lead management, saving 400+ hrs/yr.
- **Four13 Group** — Developed an Amazon Seller dashboard integrating 20+ Amazon APIs with automated reporting tools.
- **PRL BPO Technologies** — Optimized React on high-traffic pages (10K+ records, 10x faster load), replacing legacy jQuery.

Next.js, React, TypeScript, Node.js, Canvas

EDUCATION

Bachelor of Science in Computer Science

Ateneo de Davao University — 2018

SKILLS

Frontend: React, TypeScript, Next.js, JavaScript, HTML, CSS, Tailwind CSS, shadcn/ui, Radix UI, Responsive Design, Design Systems

Databases: PostgreSQL, MongoDB, Supabase, SQL

Testing & Quality: Jest, React Testing Library, Playwright, Storybook, Code Review

Architecture: Component Architecture, Monorepo Management, Micro-Frontends, Module Federation, Feature Flags

Other: Accessibility (WCAG), Internationalization (i18n), Canvas/WebGL, Three.js, Technical Mentoring, Agile/Scrum

Backend & APIs: Node.js, Express.js, MERN Stack, REST APIs, GraphQL, Authentication (OAuth, NextAuth), Third-Party API Integrations

State & Data: Zustand, Redux Toolkit, TanStack Query, React Context, IndexedDB

Build, CI/CD & DevOps: Vite, Turborepo, Webpack, Git, GitHub Actions, Docker, Vercel, Electron

Performance: Core Web Vitals, Code Splitting, Lazy Loading, Bundle Analysis, Lighthouse Audits, SSR/SSG/ISR
